

We are seeking participants with infantile hemangiomas and related conditions called PHACE and LUMBAR.

We are the Stanford Hemangioma Registry. Our goal is to investigate the underlying genetics and determine risk factors for complications in hemangiomas and the related conditions PHACE and LUMBAR. We hope to develop pharmacologic treatments for these conditions with our work.

What does participation involve?

- Review of your medical records
- Answer questionnaires about your health
- Collect blood, saliva, or tissue samples
- May ask biologic parents for a blood sample

Your participation is important.

- Help researchers understand the underlying genetics and risk factors of these conditions
- Improve care for other individuals with similar conditions

Participants will be given a gift card for providing blood samples for this study

How to participate:

Contact: (650) 497-6397 or phaceregistry@stanford.edu.

Investigator: Dawn Siegel, MD, Clinical Professor of Dermatology, Stanford University School of Medicine
